PHC GLOBAL

Biosecurity Intelligence Before You Need It

Is your business prepared for biological threats? Protect your business with proprietary intelligence and actionable insights.

What is Biosecurity?

Biosecurity is the result when biological factors negatively impact organizations and people. At PHC Global, our solutions provide not just information, but foresight by anticipating biosecurity risks before they escalate into crises.

The Importance of Biosecurity Intelligence

In today's dynamic and interconnected world, biosecurity threats pose unprecedented challenges.Our early, actionable intelligence platform empowers organizations to mitigate risks, and allows governments to proactively identify and respond to emerging threats, while allowing enterprises to ensure economic security and foster a safe working environment, before they occur.

Biological threats combine in complex ways, creating challenges more profound and unpredictable than a single threat alone, leading to compounding effects that can impact an organization's ability to respond.

PHC Global's robust global data and actionable recommendations take the guesswork out of biosecurity to help government organizations and enterprise teams answer four key questions:
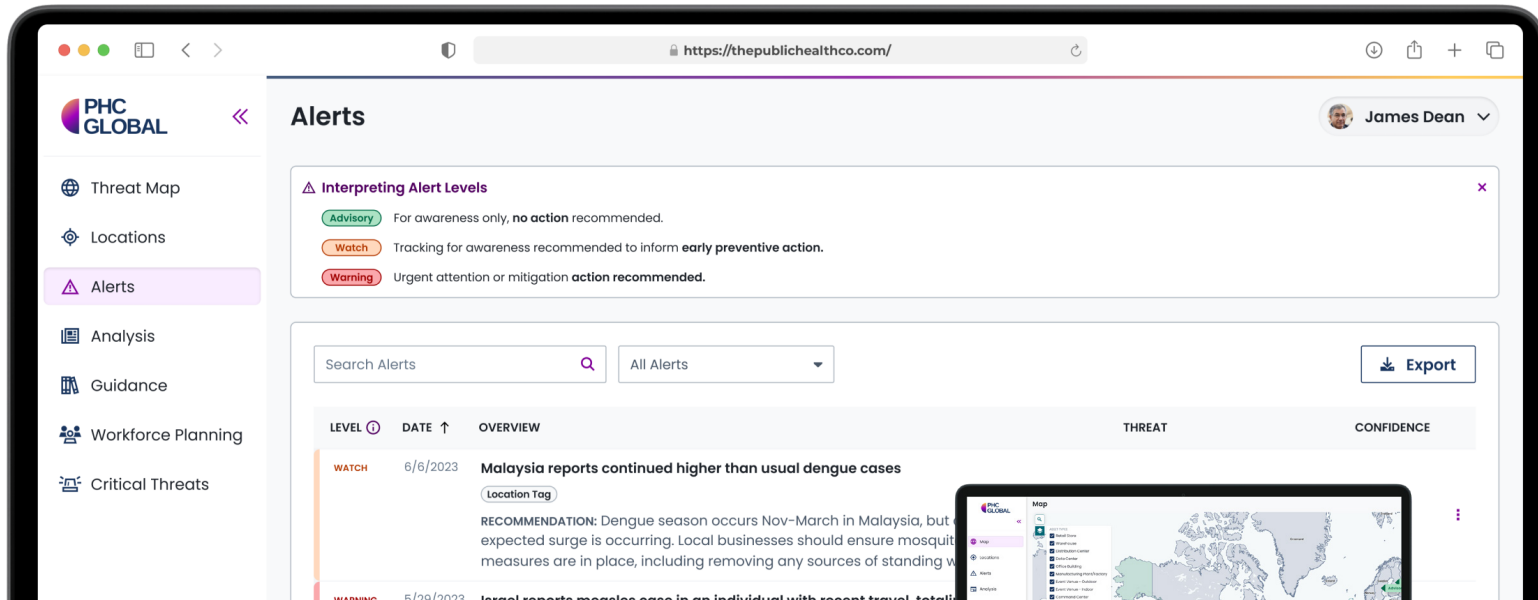

- What are the risks to my assets?
- What is going on in the world?
- What controls can I put into place to protect my organization?
- How does our business benchmark against it's peers?

About PHC Global

PHC Global is pioneering new solutions with leading edge technology to transform biological threat intelligence for the future biodefense landscape.

Our mission is to provide early biothreat detection, analysis, and attribution to enable leaders in enterprise, defense, and national security to protect humankind and capital. PHC leverages robust global data, data science, and advanced AI/ML technology to deliver proactive solutions for a safer and more resilient world.

Introducing the Pharos Platform

Pharos Platform: Your Early Warning Radar

Navigating Global Biosecurity Threats with Confidence

Pharos, PHC Global's cutting-edge SaaS platform, leverages advanced AI and machine learning to distill vast quantities of data into precise, actionable alerts. Developed by leading experts, Pharos is your strategic and tactical partner in navigating the complex landscape of global biosecurity risks. Pharos transforms uncertainty into clarity by predicting and mitigating business continuity risks. Pharos allows organizations to:

- maintain operational efficiency
- protect their humankind
- predict absenteeism
- minimize disruptions and impact

PHC Pharos is API-first and integrates proprietary intelligence layers into existing customer dashboards and systems to provide a single view of risks. Pharos includes Global Threat Tracker, a dynamic dashboard of current threat levels and alerts customized specifically for your organization's unique needs. Pharos users can filter multiple

data points, including biological threat, and filter by location, risk level, and more, to track the risks most relevant to you. You're in control with the user-friendly Pharos platform.

It's not simply managing potential risks; it's about solutions and staying ahead of them.

Experience the future of end-to-end organizational continuity management through biosecurity intelligence.
